231 439 Since the only purpose of keeping horses among the Paez is to have as large a number as possible, it is understandable that they place importance above all on the possession of mares. The birth of a filly is therefore a great joy and everyone would be happy to trade a grown stallion for a filly, "because it again gives foals." Unfortunately this exchange takes place only all too rarely, because the colonists are not interested in the degenerate horses of the Calderun. It is different with cows (kulá; steer = tolό, heifer = novílya). Here the /141/ Calderun breed (black mottled "Holstein" and brown cattle) is healthier and usually also stronger than the cattle of the colonists. Moreover, on account of the somewhat cooler climate, their bodies are almost completely free of ticks and vermin, in contrast to the cows belonging to the inhabitants of lower altitudes, normally 231 crawling with larvae and maggots. Unlike horse meat, beef is [262] eaten, but milk is never drunk, "since the Calderun never have [272] the cows milked." The breeding goal here, too, is the greatest possible number. Thus it would never happen that a cow or calf would be slaughtered. I could not learn of any preference for a particular color, for example, black-white or brown-white, or uniformly all black or white or brown. All are liked equally well [431] by the Paez, since only the number is important. There is no special attachment between a person and his livestock, for no one gives away livestock, either as a birthday, christening, or [552] wedding present. Special names or designations for livestock or pet names are not used.

233 422 231 About half the total number of Calderun cattle and horses graze on the pastures of community land. This means about 40 horses and 60 cattle. The figure shows that only a small number of Calderun families own a cow or a horse. The proportion [554] becomes even less favorable when one learns that there are three rich families who own about ten to 20 head of cattle and horses each. The other half of the large stock, as well as sheep, pigs, and small stock, remain near the houses and seek their fodder there. [241] They may also forage in the uncultivated fields of neighbors; they are prevented by the fences from breaking into the cultivated fields.

SC15 Paez SC15

147 the odor peculiar to the Indians, which becomes quite noticeable when they are sweating and which so closely resembles that of the secretion of the so-called *sahino*, or wild hog (*Dicotyles tajacu* L.), that I have more than once been deceived into believing that our trail crossed the path of a drove of these animals.

516 When at rest the Paez men almost invariably sit on their heels, the toes sustaining the whole weight of the body, while the women sit with their legs stretched together on the ground, [514] even when near the fire in their houses. In micturition young 481 girls remain standing. The gait of both men and women is short-paced and easy, the body being always slightly inclined forward, probably on account of the habit of carrying heavy loads.

824 Like all children of Nature, the Paez Indians are very keen 826 observers of their surroundings, as is shown by the minuteness of their differentiation in plants and in certain groups of insects. Castillo, for instance, gives the names of no fewer than six different varieties of ants —

[552] *kan-kik* *ci'i-kik-ne* *oia-i*
kik-finis *gune-kandi* *to-fiti*

and I collected very few plants for which they did not have a ready name.

Reproduction and Death

881 When a girl reached puberty the event was celebrated among the old Paez Indians by a special dance called *itsa-ko*, during which the young naked female was placed in a hole dug outside the hall-house and thoroughly washed with *chicha*. We have no 836 notice of pre-marital liberty being conceded to women, nor of the relation of children to parents in the family organization. As 595 tradition has it, the pre-conquest Paez were polygamous, and notwithstanding the efforts of the missionaries, it is almost certain that this practice has not completely disappeared. We know nothing about the existence of marriage ceremonies before 581 the introduction of the Catholic ritual. It is likely, however, [586] that marriages were endogamous and free, and, as such, a very frail institution, as Castillo informs us that even in his time

7. The curer toasts Thunder with the chicha, sprinkling it in the air.

8. The curer washes the patient with a calabash of remedies. He fills up completely the hole that contains the "dirt," sprinkles the remaining aguardiente, and ends the cleansing with some final advice. It is 3:00 or 4:00 in the morning.

All treatment of illness is carried out with this cleansing procedure. That is to say, when the impurity (ptans) has been removed from the body, the health of the patient is restored. The curer combats the ptans. In a sense, the cleansing is a hard fight in which the curer is engaged.

The tama. The tama is a chonta staff about 40 centimeters long and indispensable for every cure.

While in other cultures the medicine man uses the maraca as an indispensable accessory in the art of curing, viewing it as having a mythical origin and thus a sacred character and magical properties, and while, according to Roth, certain piai of the Guianas use wooden dolls in their conjurations (6), among the Paez this little staff called tama

is used. In Santa Rosa, a curer-sorceress uses in her treatments a wooden dolly dressed like the people, received, according to the informant, from Thunder himself, and called "Soft wind of Thunder."

[773] According to all the evidence, this name is derived from that mythical personage, more precisely that culture hero,

* /233 cont./

called Juan Tama, who enjoys the fame of having been the founder of pueblos, a victorious warrior, a good leader, legislator, and famed curer.

The tama is a defensive and offensive weapon of a sacred character /234/ and used exclusively by the curers; it protects from the attacks of the ptans and wards them off. It is a gift from Thunder and his badge. In visions, it is the first thing that he shows. When the curer dies, it may be inherited by a young curer, but generally it is left near the cemetery.

A curer from Calderas, possibly the one most imbued with his mission to defend the health of the people, states that the tama was left from a deed performed by the Virgin in defense of her children. On a certain occasion the sea was rising implacably over the surface of the earth, putting the lives of men in grave danger. The Virgin took pity on them, brought out the tama, and made the motions now made by the curer. The waters retreated. She left this staff for the man who became a curer. This was the origin of the tama.

Another curer from the Parcialidad of San Andrés gave us the following account concerning the origin of the tama:

"The elders say that the tama was left by Thunder himself. A man had a potato field and a rancho in the montaña. He went to harvest it with his son. One afternoon the boy refused to accompany his father, preferring to remain in the rancho. On the following day he disappeared without leaving a trace anywhere. All the steps taken by the father to locate his whereabouts were unsuccessful. On the eighth day, the boy reappeared in the rancho. The father naturally inquired as to his whereabouts and his activities. He replied that he had gone to the señor papa, who had given him the stick he carried in his hands, called tama, and aguardiente and remedies. The aguardiente was cold water from a lagoon, and the remedies were in a pouch. No sooner had he finished his tale than he fell into a deathlike trance. On the fifteenth day, at death's door, he asked his father to hand him the tama, for the señor

231 arracacha. Dogs, cats, and pigs live, the first on kitchen refuse, the second by hunting mice, and the last on grasses and roots from the thickets. They are not familiar with breeds of cattle, hogs, and sheep. Only the guinea pig is regarded as American, while the other animals are said to be genuinely Spanish.

[236] Sheep seem to have emotional value because they provide the wool for people's clothing. They are kept with affection and rarely sold or eaten.

Dogs also seem to have emotional value because of being the guardian of the houses and fields. In addition, they have symbolic value: they are the iron curtain, the protective barrier against the dark memory of the Pijao. If the latter were to reappear again, the natives argue, they would not be able to approach /323/ the houses, because dogs live there, which would inspire fear in the Pijao, for they are so dangerous for them that mere contact with their footprints or their hair would kill them. In the legends and tales there is frequent reference to these defensive concepts. The dogs have special names: Guagás (white), kuchi (black), salgento, pitán, policía. Dogs that eat sheep are invariably killed with a shotgun without previous consultation with the owner.

[262] [252] [782] [755] Guinea pigs are the favorite food of children. They kill them by strangling them and eat them boiled. These animals are not used as offerings to the Duende. Nor do they serve as presents for friends or relatives. They are also used to combat mental illness by covering the patient's forehead with the entrails of the still living animal.

235 [554] [262] They "cuidan" /show special attention/ to favorite persons with chickens and eggs. They have mingas with turkeys. Eggs are consumed, but in general they are sold.

[432] They use the honey and the wax from the hives of wild bees.

222 237 [757] The honey, they say, is good for persons who suffer from "cold." With the wax they soften hide lassos, and they occasionally use it for illumination. Domestic hives do not exist.

231 Wild animals, such as parrots, chicaos /a kind of bird/, squirrels, and micos, are never domesticated.
